## On the Subject of Mazes

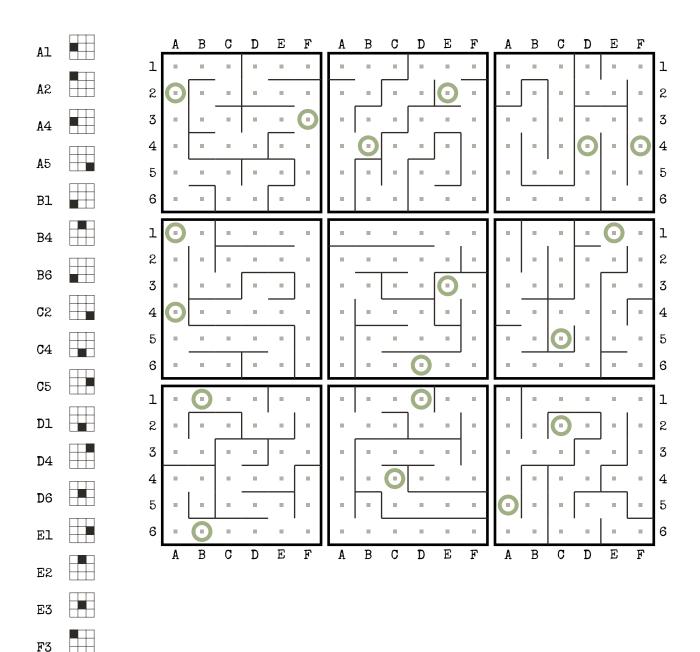

F4

This seems to be some kind of maze, probably stolen off a restaurant placemat.

- Have the defuser name any of the circular markings using a letter for columns and a number for lines.
- Find the matching maze using the helpful chart on the left below. The black square identifies which of the nine mazes matches the given circle coordinate.

- The defuser must navigate the white light to the red triangle using the arrow buttons.
- WARNING: Do not cross the lines of the maze. These lines are invisible on the bomb.
